Dear Busha hiring team,

I am applying for the Product Designer role at Busha. I am a Lagos-based designer with 5+ years of shipped work in fintech, healthtech and e-commerce, and I want to work on a product that Nigerians rely on to handle their money. Your focus on end-to-end design, UI craft and design systems is close to how I already work.

Two pieces of my work match this role. At OneHealthNG I built and scale a centralised design system, with colour, type and re-themed Untitled UI components, shared by our website, online pharmacy, the OneHealth mobile app and the Pillfinda dashboards. It sped up handoff to developers. Before that, I designed the store and refill flows and investor materials during a $100K funding round and NGN 1B in revenue, and my UX work on the OneWellness app increased engagement by 35%.

I also have fintech experience. I was sole designer on Casha Business, a business banking app with payroll and inventory, and I redesigned NaijaFXRates, where 75% of traders said its alerts helped. I do not have crypto exchange experience yet, and I would learn the product closely with your team and users.

I work with product and engineering on priorities, review other designers' work, and keep systems consistent. I use Figma Make for mobile apps, websites and web apps, and I use Claude for my own site and general design work. I live in Lagos, I'm happy to work hybrid, and I can start within one month.

Thank you for your time. I would be glad to talk through my work.
