OLANREWAJU OREDIPE

Senior Product Designer · Lagos, Nigeria

I design websites, web apps and mobile apps for health, money and hiring: products people can't afford to get wrong.

orelan95@gmail.com www.orelan.xyz linkedin.com/in/olanrewaju-oredipe

SELECTED WORK

8 products across healthtech, fintech, hiring and e-commerce

Senior Product Designer with 5+ years designing websites, web apps and mobile apps for healthtech, fintech, e-commerce and AI products in Nigeria and Canada. I lead design end to end, build design systems that speed up handoff, and mentor designers. My work has supported a $100K raise and ₦1B in revenue at OneHealthNG and 20% revenue growth at Reelcruit.

01 HEALTHTECH · 2024 – PRESENT

OneHealthNG

One design language for a growing health ecosystem

$100K raise and ₦1B revenue (team), 35% higher engagement

02 FINTECH · 2026

Casha Business

Banking, payroll and inventory in one app for Nigerian SMEs

Full app in two weeks; not launched

03 HEALTHTECH · 2021 – 2024

iWello

Affordable healthcare for people who can't afford healthcare

+40 bookings a week, 10% fewer no-shows

04 RECRUITMENT / AI · 2022 – 2024

Reelcruit

AI job matching for tech talent and the companies hiring them

25% faster hiring, 20% revenue growth

05 PROPTECH · 2023

QShelter

Making a Nigerian mortgage feel possible

Live product

06 FINTECH · 2023

NaijaFXRates

A redesign that makes the naira's daily moves readable

75% of traders helped by alerts

07 E-COMMERCE · 2023

Zygomed

An online store for African fashion, beauty and lifestyle

Live store, PM testimonial

08 DATING / AI · 2022

Sociall.ai

A dating app that looks past first impressions

Concept, not launched

01 · HEALTHTECH · 2024 – PRESENT

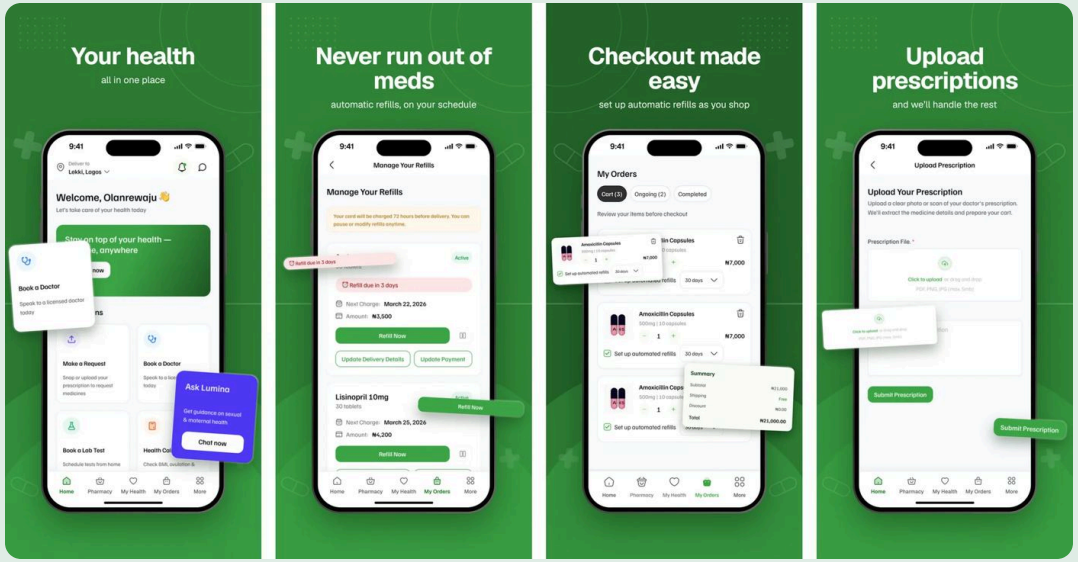

OneHealthNG

One design language for a growing health ecosystem

I joined OneHealthNG on contract in 2024 and was promoted to Senior Product Designer in January 2026. I now lead design across the company's website, online pharmacy, refill and weight-loss programmes, its new mobile app and the Pillfinda web dashboards, and I direct a junior designer on the Pillfinda mobile app.

My role	Product Designer & Webflow Developer (Apr 2024 – Dec 2025), Senior Product Designer (Jan 2026 – present)
What I owned	Main website, online pharmacy store, auto-refill subscription, The Method weight-loss programme, OneHealth mobile app, Pillfinda web dashboards, the design system, five Webflow microsites
Worked with	Product managers (who ran research and testing), engineering leadership, marketing
Platforms	Website, Web app, Mobile app

$100K raise and ₦1B revenue (team), 35% higher engagement

ONEHEALTHNG · KEY DECISIONS

A centralised design system before more screens

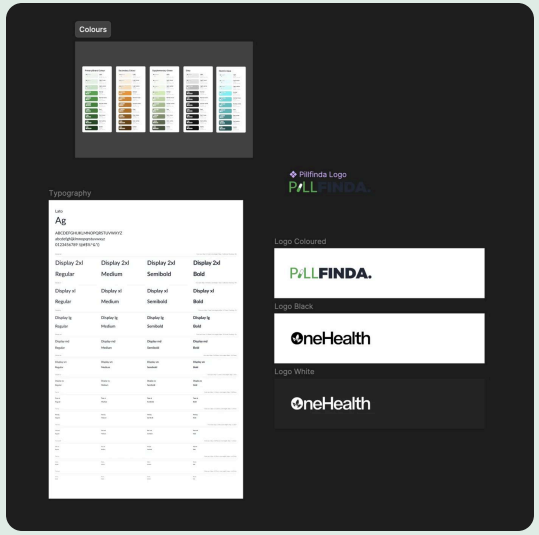

I created universal colour styles and a type guide that every OneHealth design now uses: five palettes (brand green, secondary orange, supplementary green, grey and electric aqua), each with ten shades covering default, hover and active states, plus a Lato type scale from Display 2xl down to Text xs in four weights, and logo rules for OneHealth and Pillfinda. Rather than build components from scratch, I adapted components from the Untitled UI design system to OneHealth's brand, which gave the team a proven base to work from quickly.

One front door, three audiences

The homepage routes people by who they are: patients go to the pharmacy, insurers and telemedicine companies to the PBM offer, and pharmacy owners to the network sign-up. Each audience gets its own path instead of one page trying to speak to everyone.

Design for the repeat purchase, not the first one

Patients with chronic conditions need the same medicines every month. The auto-refill subscription puts the savings, the remaining refills and the delivery status in front of them, so staying subscribed is the easy choice.

OUTCOMES

- Funding and revenue: I contributed design to both the investor materials and the product during a period in which the company raised $100K and passed ₦1B in revenue.
- Whitepaper site: the Webflow whitepaper I designed and built increased site traffic by 10%.
- OneWellness: UX improvements to the OneWellness app raised engagement by 35%.
- Cross-platform redesign: a modernised brand and experience across the website, core mobile app and Pillfinda.

02 · FINTECH · 2026

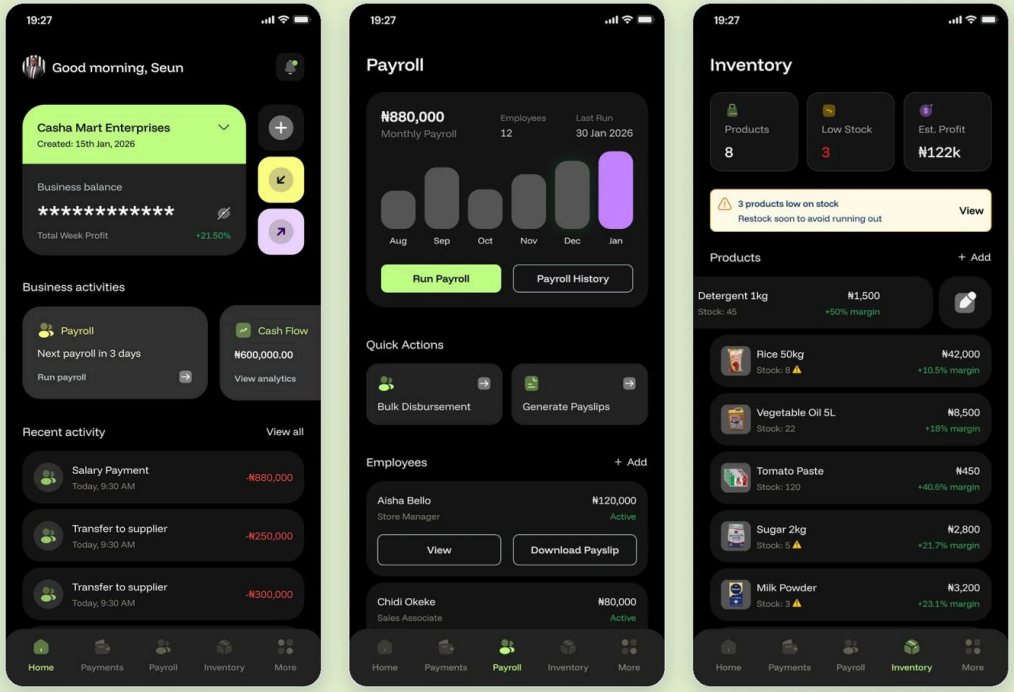

Casha Business

Banking, payroll and inventory in one app for Nigerian SMEs

As the sole designer, I designed the Casha Business mobile app in two weeks, working from a product requirements document: sign-up and business setup, the home dashboard, payments and transfers, payroll, inventory, team roles, analytics, statements and settings.

My role	Sole Product Designer, mobile app
Worked with	Tolu Araba (Product Manager)
Platforms	Mobile app

Full app in two weeks; not launched

Navigation in the order an owner thinks

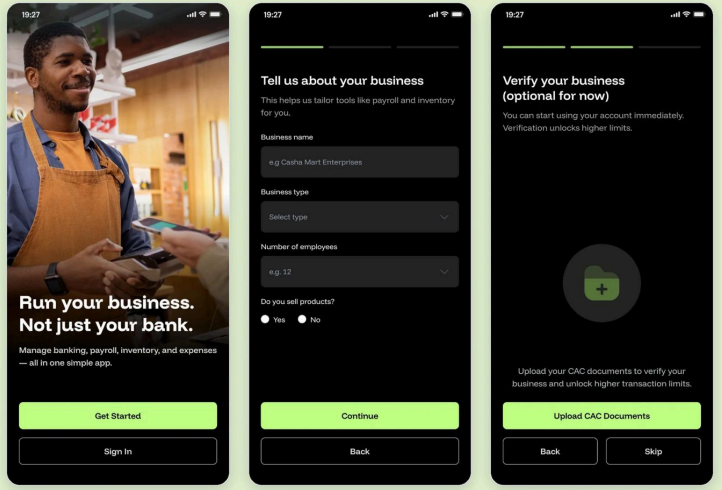

The five tabs follow the questions a business owner asks through the day: how much money do I have (Home), who am I paying (Payments), are my staff paid (Payroll), do I have stock (Inventory), and everything else (More). Payroll and inventory, the two features competitors lack, get their own tabs instead of sitting behind a menu.

Start using the account before verification

Sign-up asks only what is needed to tailor the app: business name, type, number of employees, and whether the business sells products. That last answer decides whether inventory is set up.

Payroll in one confirmed tap

Paying staff is usually a run of manual transfers. Here, the payroll tab shows the monthly total, number of employees and last run date, with Run Payroll as the main action.

OUTCOME

- I designed the full app in two weeks and handed it over for development in February 2026. The app hasn't launched yet, so there are no usage results.

03 · HEALTHTECH · 2021 – 2024

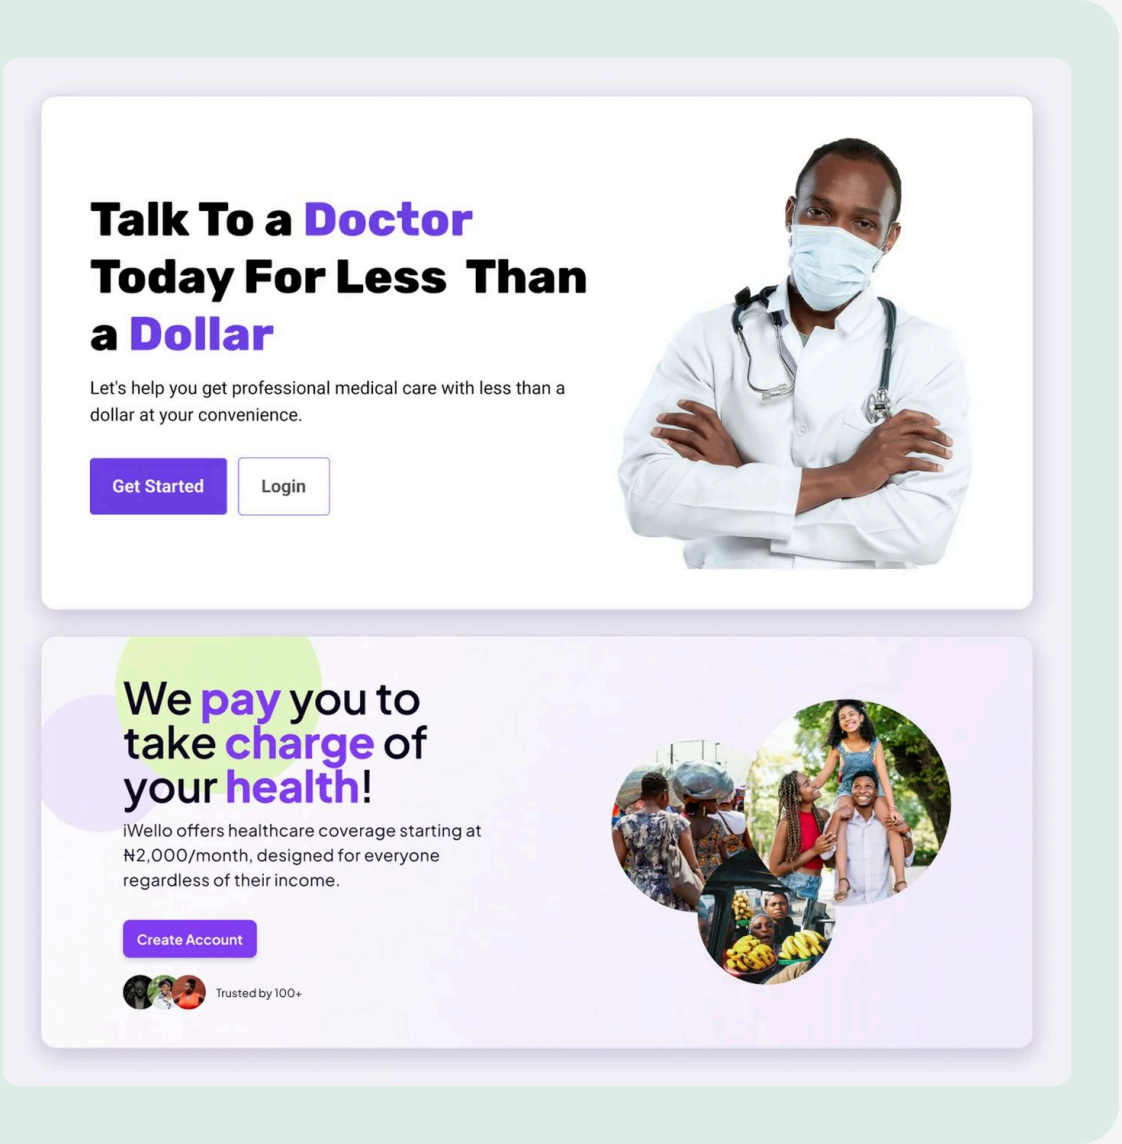

iWello

Affordable healthcare for people who can't afford healthcare

I designed every version of iWello, from its 2021 telemedicine marketplace to the ₦2,000-a-month health subscription live today. The users are low-income Nigerians, many with limited literacy, so every screen had to work for someone who has never used a health app.

My role	Product Designer, part-time (Nov 2021 – Mar 2024); design consultant (2025)
What I owned	All iWello design: website, patient, doctor and pharmacist web apps, mobile app, and the current subscription site
Worked with	Chidinma (Product Manager), Tayo Akosile (Frontend), Ben (Backend), Ismail (founder)
Platforms	Website, Web app, Mobile app

+40 bookings a week, 10% fewer no-shows

Plain language over medical language

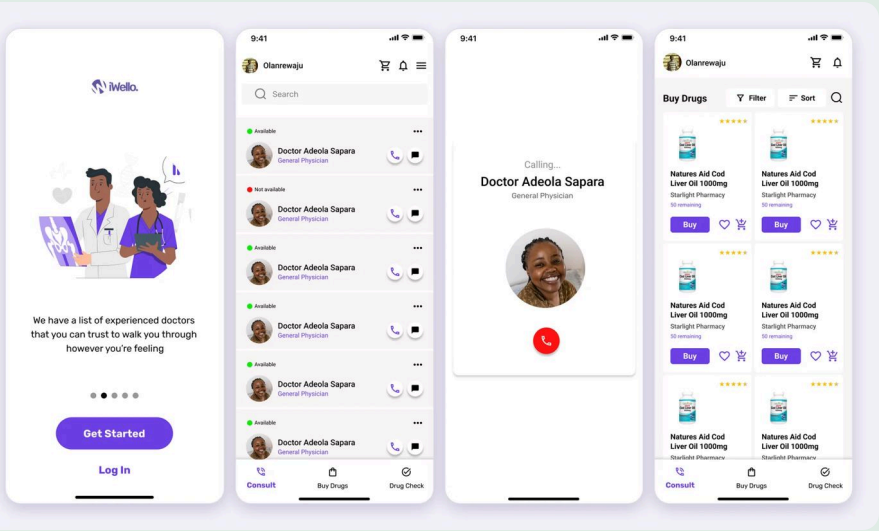

Copy is short, concrete and sometimes in Pidgin. The surgery-cover section warns that instant coverage is a scam sign, which builds trust with users who have been burned before.

Show the steps, not the policy

Pricing and surgery cover are explained as numbered steps (pick a plan, stay consistent, wait 90 days, request your procedure) instead of terms and conditions.

Meet people where they already are

Users can sign up online, through WhatsApp or at a community outreach. Many first-time users never touch the website alone, so the design supports assisted sign-up.

OUTCOMES

- +40 appointment bookings a week after the 2021 designs launched.
- 10% fewer no-shows with the automated booking tool, also after the 2021 launch.
- Company results today: iWello reports 20,000+ community members served, 50+ outreaches, a 40% average cut in out-of-pocket spending and a 90% satisfaction rate (iwello.org).

04 · RECRUITMENT / AI · 2022 – 2024

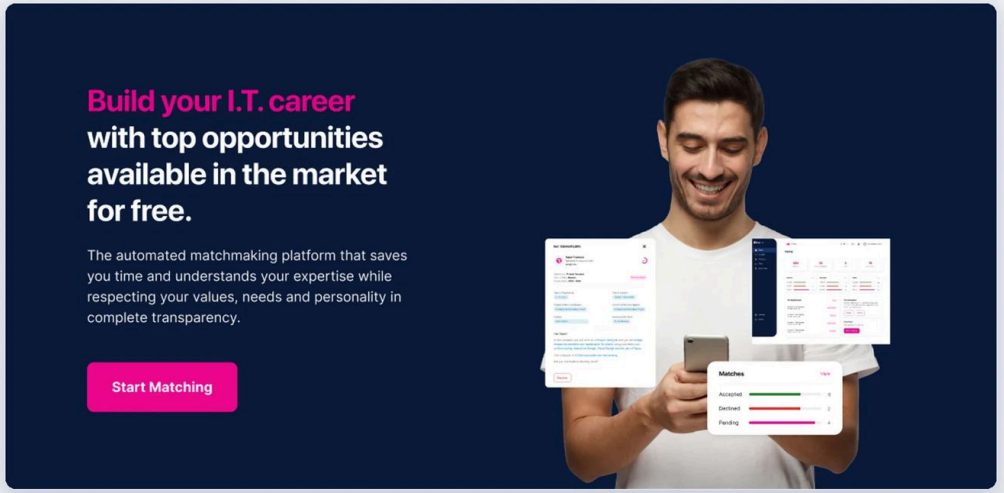

Reelcruit

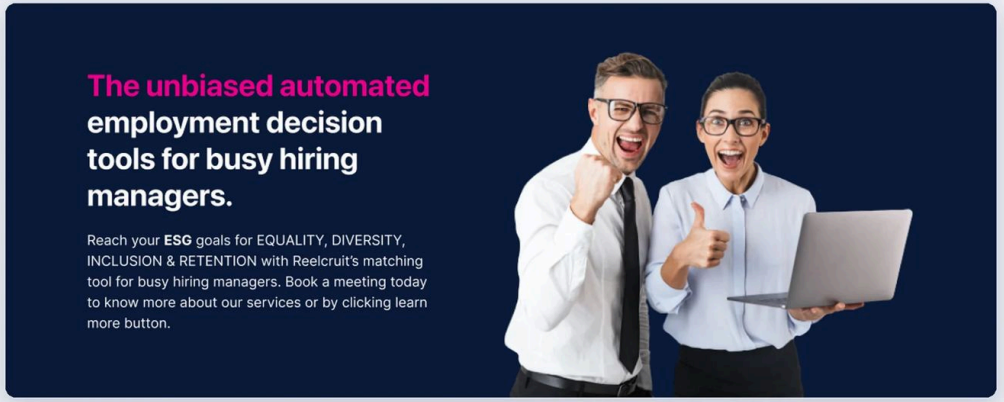

AI job matching for tech talent and the companies hiring them

As lead designer, I designed all five sides of Reelcruit: the public website, the candidate dashboard, the employer dashboard and two admin consoles. After launch, recruiters found qualified candidates 25% faster and company revenue grew 20% while I led design.

My role	Lead Product Designer, contract (Nov 2022 – May 2024)
Worked with	Ralph François (founder and Product Manager), Nancy (Head of Design, set direction and reviewed), Kalu (Frontend), Anselme…
Platforms	Website, Web app

25% faster hiring, 20% revenue growth

Two candidate dashboards, not one

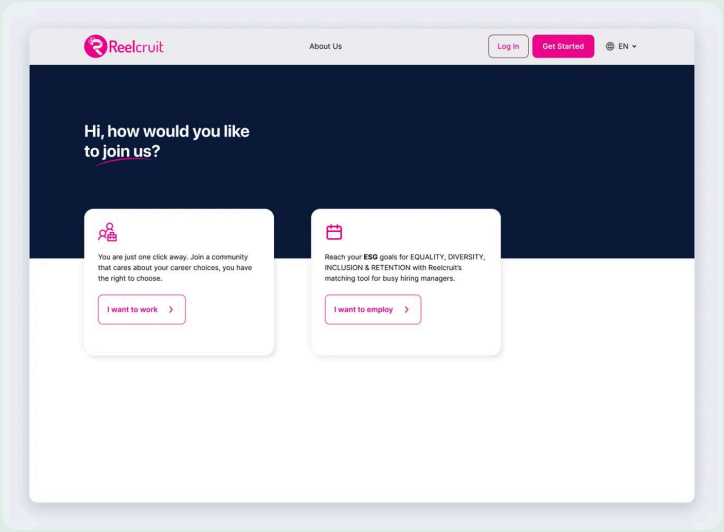

Permanent and contract candidates care about different things: career growth versus availability and rates. Giving each its own dashboard kept both clean instead of cramming every field into one.

Profiles worth filling in

AI matching depends on rich profiles, but long forms cause drop-off. Stakeholder reviews flagged the first version of onboarding as too long, so I broke it into short guided steps that ask for skills, goals and work preferences.

Matches the user can steer

Too many recommendations overwhelm people. After stakeholder review, I added filters for remote work, salary and skills so candidates can narrow what they see, and sorting so recruiters can rank by skill match or recency.

OUTCOMES

- 25% less time for recruiters to find qualified candidates.
- 30% more time spent by users engaging with job suggestions and profiles after my redesign, compared with before it.
- 20% revenue growth for Reelcruit over the period I led design. This was a company-wide result that my work contributed to, not one tied to a single design change.
- I also mentored junior designers and ran design-to-development handoffs.

05 · PROPTECH · 2023

QShelter

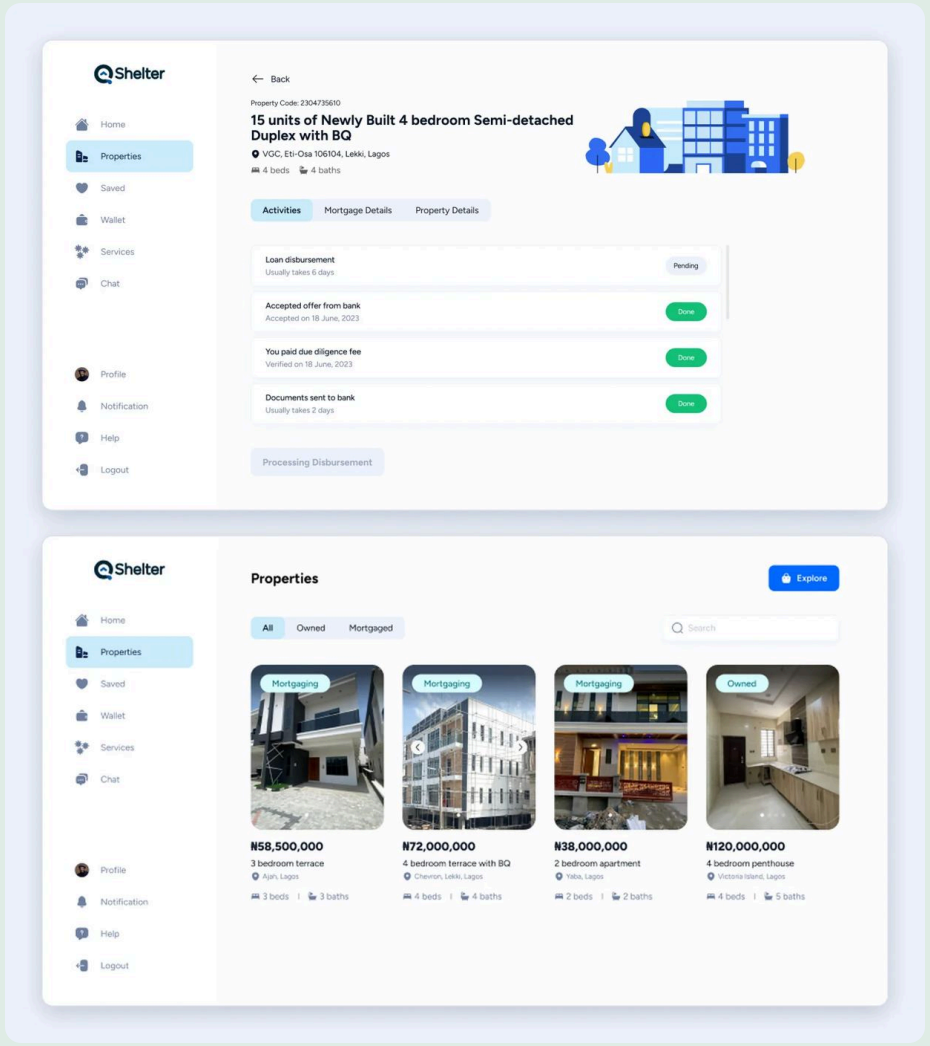

Making a Nigerian mortgage feel possible

I co-designed QShelter, a platform that puts buyers, property developers, mortgage lenders, pension fund administrators and legal experts in one place. I owned the website and web app; my co-designer owned the mobile app.

My role — Product Designer, co-lead with Iluezi-Ogbaudu Onowomano. I owned the website and web app, designing the buyer dashboard and contributing to the developer, lender,...

Platforms — Website, Web app

Live product

One journey across many parties

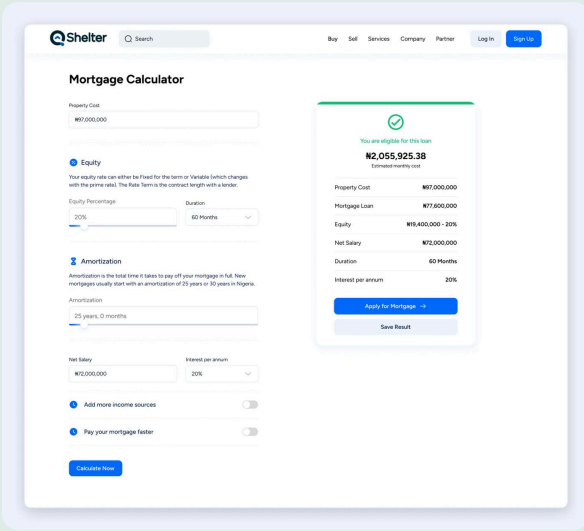

A mortgage moves between buyer, developer, lender, pension fund and legal team. The web app shows the buyer every step of their application, what is done and what is still pending, and how long the next step usually takes, instead of leaving them to chase each party.

Affordability before the listing

A mortgage calculator lets buyers see their monthly cost and whether they qualify before falling for a property they can't finance.

Trust signals on every listing

Listings come from certified developers and vendors, and that verification is visible where buyers make decisions.

OUTCOMES

- QShelter is live at qshelter.ng, and the features shown here, including the application tracker and the income-sources option, shipped as designed.

06 · FINTECH · 2023

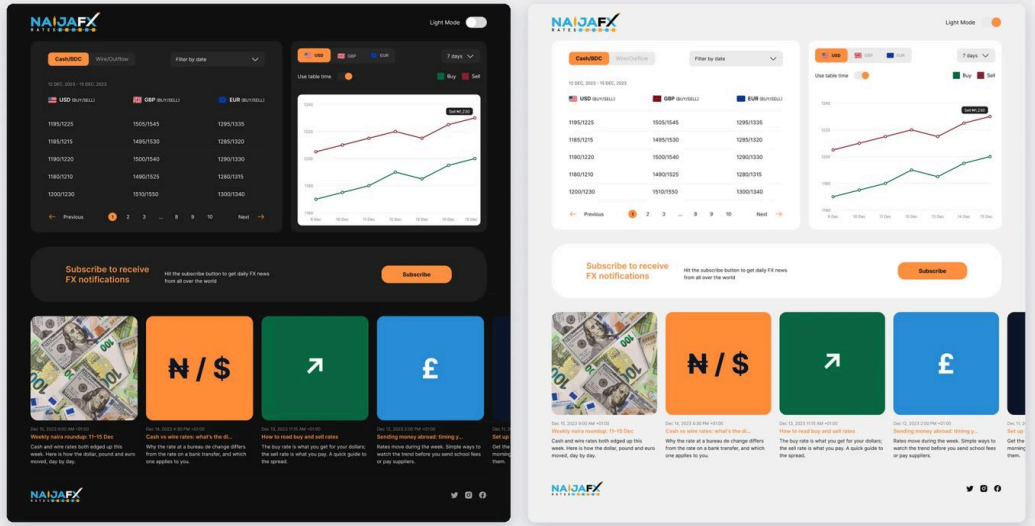

NaijaFXRates

A redesign that makes the naira's daily moves readable

I redesigned NaijaFXRates, a site that tracks the naira against the dollar, pound and euro. The original site worked, but its table, chart and sign-up form were hard to read and fell apart on phones. My redesign rebuilt it as one calm dashboard in dark and light themes, on desktop and mobile. 75% of traders said its rate alerts helped them make better trading decisions.

My role	Product Designer, full redesign of the website
What I owned	Desktop and mobile, dark and light themes, subscribe flow
Worked with	Kalu (Backend Developer)
Platforms	Website

75% of traders helped by alerts

NAIJAFXRATES · KEY DECISIONS

Rates and trend side by side

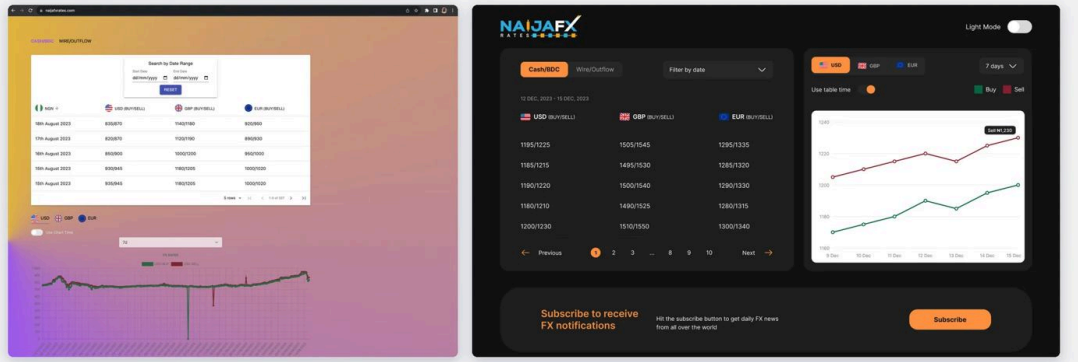

" Putting them next to each other on desktop means one glance answers both, instead of scrolling between them.

A chart sized to the question

The old chart plotted almost a year of data, so daily changes disappeared and one bad data point dragged the line to zero. The new chart defaults to seven days, plots buy and sell as two clearly coloured lines, and labels the latest rate, with a menu for longer ranges.

Cash and wire as two simple tabs

The two markets used to look like two separate pages. They are now tabs at the top of the table, so switching between cash/BDC and wire rates is one tap.

OUTCOMES

- 75% of traders reported that the rate alerts helped them make better-informed trading decisions.
- The redesign shipped with rate alerts, the cash and wire tabs, and the dark and light themes.

Full case study: www.orelan.xyz/projects/naijafxrates

07 · E-COMMERCE · 2023

Zygomed

An online store for African fashion, beauty and lifestyle

As the sole designer, I designed Zygomed's full shopping experience: the storefront, customer account area, booking for beauty appointments and consultations, video and blog pages, and the mobile app.

My role	Sole Product Designer, web (desktop and mobile) and mobile app
Worked with	Tolu Araba (Product Manager, who also represented the client), Allen (Frontend), Michael (Backend)
Platforms	Website, Mobile app

Live store, PM testimonial

ZYGOMED · KEY DECISIONS

Browse by brand as well as category

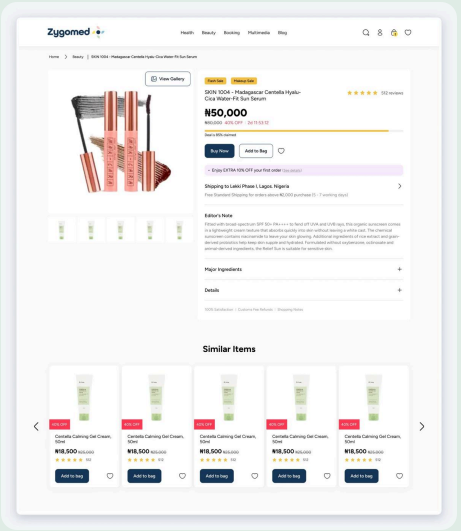

With many brands in one store, a brand page lets shoppers who already trust a label go straight to it.

Design the empty states

A search with no results suggests other paths instead of a dead end, so shoppers keep browsing.

A checkout that shows the full cost before payment

A new store has to earn trust, and surprise charges at the last step are a fast way to lose it. Shoppers choose a delivery partner on the checkout page, and the order summary lists subtotal, delivery, tax and any discount, so the total is never a surprise.

OUTCOMES

- The store is live. I don't have sales or engagement figures for this project.

Full case study: www.orelan.xyz/projects/zygomed

08 · DATING / AI · 2022

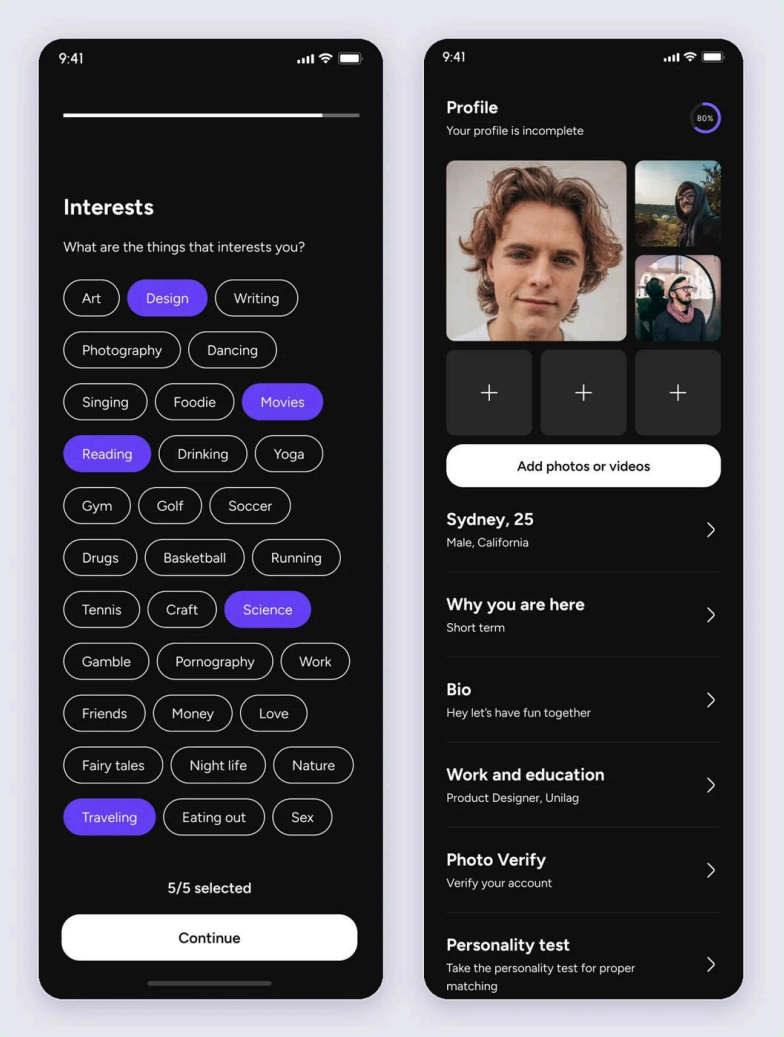

Sociall.ai

A dating app that looks past first impressions

As the sole designer, I designed the landing page and the responsive web app for Sociall.ai, a dating product that uses AI and behavioural science to help people get past snap judgments. The product was designed and handed to development but has not launched.

My role	Sole Product Designer, landing page and responsive web app
Worked with	Ralph François (Product Manager), Kalu (Full-stack Developer)
Platforms	Website, Web app

Concept, not launched

SOCIALL.AI · KEY DECISIONS

Make the promise clear before sign-up

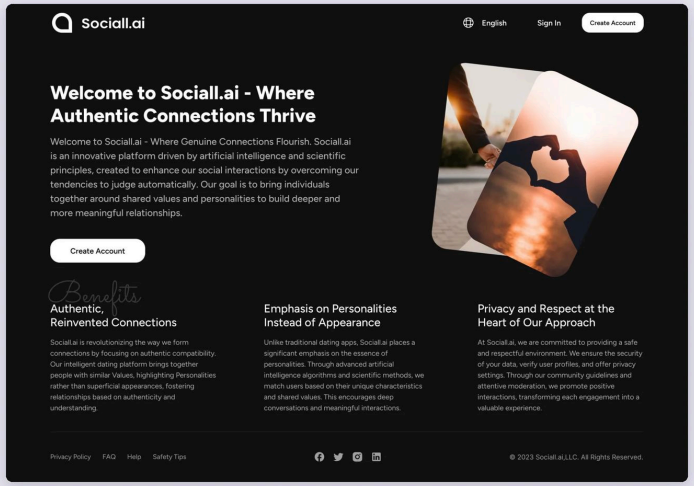

ai different: personality over appearance, and privacy and respect, with verified profiles and moderation. People who sign up know why the app will ask more of them than a photo and a swipe.

Build profiles around personality, not just photos

Alongside photos, a profile covers why someone is here, their bio, work and education, a personality test, everyday details like drinking, religion and pets, expressions and interests. There is more to match on than a face.

Break the long onboarding into one question per screen

Onboarding asks a lot, so each step asks one thing, with a progress bar at the top showing how far there is to go. Interests are capped at five, which keeps the step quick and makes each choice say something.

OUTCOME

- The app has not launched, so there are no usage results. The founder was happy with the design:
